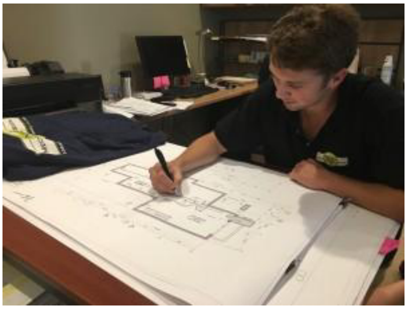
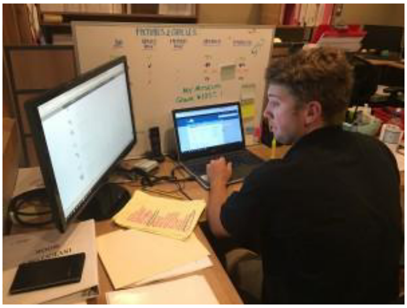
Everett Walsh – Mini-Split Sales at NMD

Posted on August 20, 2017

Everett studied mechanical engineering at the Massachusetts Maritime Academy. He is working with Dave Sprague in the new construction side of NMD.   His role is to assist with the various projects that come in – design, sizing, and sales. Everett visits jobsites to check in on the work of the various NMD crews as they install new mini-split and ducted heat pump systems.

Everett carefully checks the layout of the proposed system to make sure all of the registers will be in the correct location and that the heating and cooling loads will be met.





Once he is happy with the design, the layout, and the performance of the system he places the order for the equipment and prepares the NMD team for the installation.
